

K&K FACT SHEET

Last updated: 13.07.26

K&K FACT SHEET

Overview of the general design options
available across our product ranges.

Here you will find information about available wood
finishes, fabric and material options, colours,
and other customization possibilities.

The purpose of this guide is to give you and
your customer an overview over the different
solutions to choose from.

For detailed product specifications or further assistance,
please use the “Fact Sheet” for the specific range.

—
We treated this wood with lacquer.

Only available in oak!

ASH C36

Lacquered

—
We treated this wood with lacquer.

Only available in ash!

ASH C44 / OAK C44

Black matt lacquered

—
We treated this wood with black stain, and treated it with matt lacquer.

C44 is only for products without patination.

**Colour C14 is a black stain with oil on top, which requires careful and frequent oiling. If this is not adhered to, there is a risk that the black underlying stain will rub off.*

TAKE CARE OF YOUR SOLID WOOD FURNITURE

Keep the natural beauty alive.

SOLID WOOD

A living material

Solid wood is a living breathing material, which means that it can be affected by the climate of its surroundings. In a dry atmosphere, small movements in the timber may appear as tiny cracks. However, this is a natural characteristic of solid wood. We strongly recommend that you keep your furniture in a climate-controlled area at a humidity level between 25-50% to minimize the risk of any movement and cracking of the wood.

Movements like bending, expanding or contracting can happen if the wood is exposed to fluctuations in temperature and humidity. This will often correct itself again after some time in a stable and normal indoor climate.

NATURAL VARIANTS IN WOOD

No two trees are identical, which means that the structure, texture and colour in each plank of wood in our furniture varies. You may say it is the fingerprint of nature. This is a natural occurrence in solid wood and is caused by different conditions in the climate in which the tree was grown. In our production process we take pride in hand selecting the wood so that the grain and the colour of the planks match to ensure an overall appearance that is well balanced, while still maintaining and respecting the differences that each piece of solid wood has.

WOOD SORTING

In our wood sorting we distinguish between an A- and a B-side. The A-side is the focal point and has the finest wood sorting. On the back side, the B-side, smaller cracks and more knots and imperfections are allowed.

The main plate and additional plates will never be made from the same planks, the same piece of wood. Therefore difference in structure, texture and colour will naturally appear between table and leaves.

TAKE CARE

Of your solid wood furniture

To ensure that your furniture will continue to stand the test of time, it is important to maintain it correctly. Visit our website www.kristensen.com for recommended care products!

RECOMMENDED BEFORE USE

We recommend upon arrival that you treat your furniture.

- For oiled furniture with a natural wood oil, except white oiled furniture, for these we recommend a white pigmented oil. During the delivery process the packaging will have absorbed some of the oil from your product. Also, the furniture is not fully saturated on shipment.
- For soaped furniture with a soap treatment. The wood fibers may rise, this is normal, sand with sandpaper (grain 240).
- For lacquered furniture with a lacquer care product. This will make the surface more resistant to grease marks and scratches.

DAILY CARE

To keep your furniture clean and free of marks or stains, please ensure that any liquids or grease are wiped off the surface immediately. To clean use a hard wrung cloth and do only use very mild detergents. Do not rub hard, wipe with movements in the direction of the wood. Do not use microfiber cloths.

EXTENDED CARE (ANNUALLY)

We recommend to maintain with a care product minimum twice a year. Depending on conditions like the humidity and exposure to heat and sunlight maybe more frequently. Remember to treat the underside of the wood also so it is treated evenly overall.

REPAIR OILS, SOAP & LACQUER

Our oils are 'Master oils', which means that they are only to be used if the table is worn and/or lacks colour.

Before applying repair oil, the table must be properly sanded and cleaned. For daily care and maintenance, use care oils as recommended. Please refer to our store or our online care instructions for guidance.

For more detailed guidance and pricing, please go to [maintenance on our collection.kristensen.com](https://collection.kristensen.com)

CHAIRS AROUND OUR DINING TABLES

Here you can see the calculated number of chairs that can be placed around our round dining tables.

Please note that the illustrations are for guidance only and also depend on the chair width and chosen leg type.

Please note that not all tabletop sizes shown are available in the different Kristensen table ranges.

ROUND DINING TABLE WITHOUT MIDDLE EXTENSION

The illustrations show the chairs when they are placed underneath the table. When the chairs are in use, they will be pulled further out, allowing space for approximately 1–2 additional chairs around the table (130 cm).

ROUND DINING TABLE WITH MIDDLE EXTENSION

For tables with a middle extension, you can calculate 1-2 additional chairs per extension leaf. Here shown with 4 extensions leaves.

CHAIRS AROUND OUR DINING TABLES

Here you can see the calculated number of chairs that can be placed around our rectangular dining tables.

Please note that the illustrations are for guidance only and also depend on the chair width and chosen leg type.

Please note that not all tabletop sizes shown are available in the different Kristensen table ranges.
